

INTERNATIONAL WROUGHT COPPER COUNCIL

IWCC Statistical Bulletin

The IWCC Statistical Bulletin contains production, demand, import and export data for the main semi-manufactures.

Production data have been supplied by National Groups, trade data are taken from either national customs or in the case of Member States of the EU, Eurostat.

Apparent Domestic Consumption (ADC) is calculated as production plus imports less exports. Adjusted consumption takes account of trade misclassifications and 'double counting', that is material which is part-finished in one country and exported and finished in another.
